

# The Boss - *the monitoring genius*

Gather the entire factory into a unique and user-friendly monitoring system. Get a full overview of all processes in production. The Boss has unlimited connection possibilities, and you can connect both new and existing equipment.

# The Boss - *the monitoring genius*

Knuro has 10 years of experience in developing machinery and automation solutions for slaughterhouses and other industries.

Now we are launching our new product, The Boss, which is a flexible tool for monitoring all types of processes in industrial production. Knuro has created a solution tailored to the needs of salmon and trout production.

Beijer Electronics is our supplier of Zenon software, which is used in industries such as automotive, power generation, and pharmaceuticals worldwide. For example, it manages the entire production in BMW's factories.

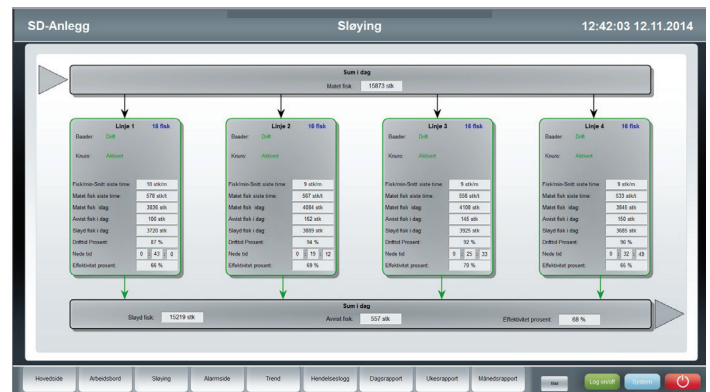

With its unique flexibility, it can control and monitor whatever is needed. Zenon can communicate with all types of PLCs and control systems on the market.

Customers can be assured that this is a recognized and well-tested system with good support options.

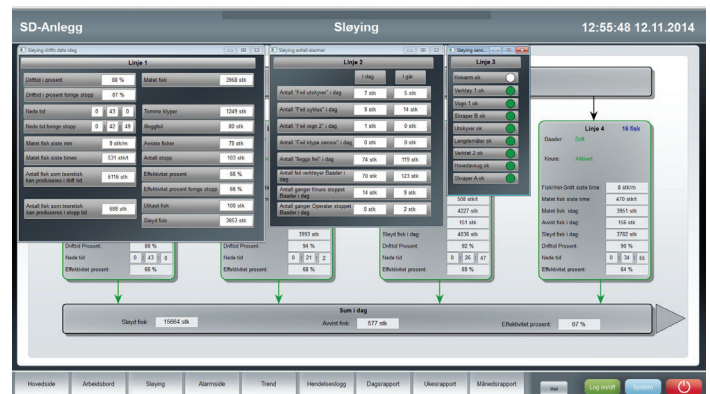

The Boss can be expanded step by step as the customer's needs change.

The images on the right show a few examples of what can be extracted from Knuro analysis – our own solution developed to monitor the processing line.

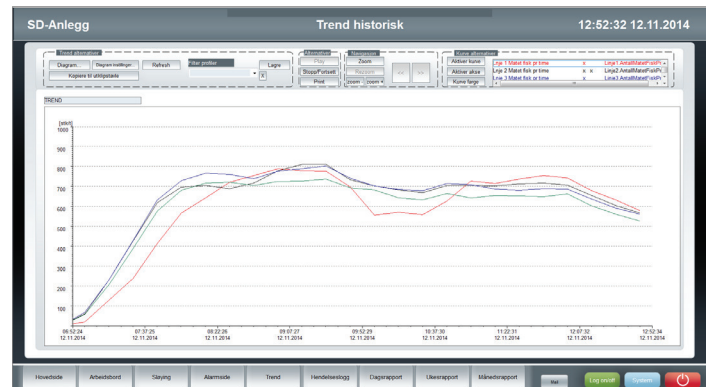

The Boss automatically generates and sends reports on today's production to selected individuals in the company.

Status overview displaying production data so far.

Displays a selection of expanded information. Here, one can retrieve background data to obtain more detailed information about the status of the processing lines.

Trend showing the number of fish fed into the machine for each hour and for each processing line. Historical trend reports can also be retrieved. The system can generate trend reports for all systems that the customer wishes to report on.
